**NEWS RELEASE**

April 5, 2011

**Sego Resources Reports 1.26% Copper, 1.06 grams/tonne Gold and 3.79 grams/tonne Silver over 52 Metres, the full length of Percussion Drill Hole 9**

Sego Resources reports that the fire assay results from phase one of the percussion drilling program at Miner Mountain have been received for 22 of 34 drill holes. The grid drilling was over a gossan cap and a Titan 24 IP anomaly (2km x 250m) known as the Cuba Zone. These preliminary results indicate that at the east end of the grid the mineralized zone is open to the North, East and South. Results for the holes at the west end are pending.
