NEWS RELEASE

March 24, 2011

Sego Announces 24 metres of >10,000 ppm Copper From Miner Mountain Percussion Drilling >10,000 ppm Copper = >1% Copper 100 ppb Gold = 0.1 grams Gold

Sego Resources reports that rock geochemistry results from phase one of the percussion drilling program on at Miner Mountain have been received for 22 of 34 drill holes. The grid drilling was over a gossan cap and a Titan 24 IP anomaly (2km x 250m) known as the Cuba Zone. These preliminary results indicate that at the east end of the grid the mineralized zone is open to the North, East and South. Results for the holes at the west end are pending.

For tables showing results for each hole and a location map please visit our website www.segoresources.com

Highlights include:

- Percussion Drill Hole 9-with 24 metres of greater than 10,000 ppm copper and including one 2 metre section of 10,597 ppb gold (10.597 grams/t) the hole was very well mineralized, top to bottom.
- Percussion Drill Hole 21 was also mineralized top to bottom with 4 metres of greater than 10,000 ppm copper.
- Percussion Drill Holes 2,8,12,13,14, and 15 also bottomed in significant copper and/or gold mineralization.
- These preliminary results indicate that at the east end of the grid the mineralized zone is open to the North, East and South.

All results over 1,000 ppm copper are being sent for fire assay.

Sego Resources Inc.'s sole project is the Miner Mountain Project, a Copper Gold Porphyry project near Princeton, B.C., 15 kilometres north of Copper Mountain Mining Corporation's former copper producer, which closed in 1996. Copper Mountain Mining Corporation is planning to restart full production in June 2011. The Miner Mountain Project is situated within the Traditional Territory of the Upper Similkameen Indian Band, with whom Sego has a Comprehensive Memorandum of Understanding.
