**NEWS RELEASE November 22, 2011**

**Sego Resources Announces Start of a 2000 Metre Phase III Percussion drill Program  
at Miner Mountain Project**

Sego Resources Inc. ("Sego" or the "Company") is pleased to report that it has begun a 2,000 metre third phase percussion drill program targeting the eastern extensions of the new zone outlined in the phase II program (See NR April 20, 2011 and November 4th 2011 for past drilling results).

The Phase II drilling intercepted wide zones of mineralization and intensely altered rock. The percussion chips were split by 2-metre interval, with half being sent to Acme Labs in Vancouver for ICP analysis and fire assay. Fire assay results will be released when received and reviewed.

Sego Resources Inc. is a mineral exploration company, exploring the Miner Mountain Project, a large scale porphyry copper-gold target northeast of Princeton B.C. Exploration to date, has located zones of surface copper-gold mineralization and drilling has confirmed the presence of significant copper-gold grades at depth. The Miner Mountain Project is 15 kilometres north of Copper Mountain Mining Corporation's former copper producer (closed 1996) that resumed production in August 2011. The Miner Mountain Project is situated within the traditional territory of the Upper Similkameen Indian Band with whom Sego Resources Inc. has a memorandum of understanding which provides a constructive framework for future development and exploration. The Miner Mountain property is 2,056.54 hectares in size.
